THE FINE FOUNDATION

ABOUT THE FELLOWSHIP

The Patient Safety Fellowship prepares recent and current graduate students to apply emerging implementation science methods, team-based problem-solving strategies, and continuous quality improvement methods. The Fellowship is a program of the Jewish Healthcare Foundation (JHF), Pittsburgh Regional Health Initiative (PRHI), and Health Careers Futures, in partnership with the Fine Foundation.

This year's Fellows have the unique opportunity to interview past Fine Award winners—groups that have demonstrated teamwork excellence in various healthcare settings—to discover the key factors that drive sustained quality improvement and culture change. The Fellows will share their findings during a final presentation, and they will collectively select three winning teams to receive the 10th anniversary Fine Award (up to \$20,000).

As a Fellow, you will:

- Learn about the Foundation's signature quality improvement methodology, Perfecting Patient CareSM
- Discover and apply implementation science methods to assess what helps and hinders health improvement project implementation and sustainability
- Develop quality improvement and contextual research skills to become leaders, better your workplace, and make health care safer
- Strengthen your resume with a fellowship certificate
